

# PHOTOGRAPHCS LOG

I have no idea what to say for my photo. I got no idea of what to make and what should I shoot in the first two days. I went out and took random pictures which turned out no help at all. What you see below is an engine of a car, I crossed by a broken vehicle and I took the picture while no one's watching. You can see three pipes diving the canvas. Or, three curves divided the canvas into several triangles. I put some leaves and rocks from the photo I took alone the way to add more various shapes. Natural elements always give us the most comparison of shapes in compare of artificial gears. There's repetition of patterns at the end of the curve. Creating even more shape changes on the curve itself. I wish my picture could look more dynamic as there's no stiff or unchanged lines. The last photo I used is for texture, I used the rough surface of a tree trunk and put it on the curve so there's not only shape change and surface change. I hope you like it.
